

THE WESSEX PROGRAM

INTRODUCING THE WESSEX TEST EQUIPMENT SLIP RESISTANCE PROGRAM WWW.WESSEXTESTEQUIPMENT.CO.UK
WWW.BRITISHPENDULUM.CO.UK
WWW.TORTUS3.CO.UK

WHY? Prevention is better than cure...

...Slips, Trips and Falls (STF) accidents account for over half of all reported injuries, costing employers and organisations substantial losses in liability claims every year, and costing individuals personal injury, even death, **as a direct result of preventable slip accidents.**

If you provide flooring in a public area, then **you are directly responsible** for ensuring and maintaining its resistance to slips. This is a legal requirement. Are you breaking the law?

Many STF accidents are preventable: the Wessex program is designed to help with this responsibility, to provide a **tailor made solution** enabling prevention before a cure becomes necessary.

WHY US? Wessex Engineering has **over 50 years** experience in the specialist field of slip resistance. The Wessex program offers:

- **The Products:** the Pendulum Skid Tester (also known as the British Pendulum), and the Tortus Floor Friction Tester
- **Contract Floor Testing** to suit your individual company requirements
- **Full product training** to ensure that correct methods are used and procedures followed
- **Consultancy** and global support
- **Maintenance, calibration and repair** (including ALL models of TRL type skid resistance testers).

HOW DO YOU BENEFIT? Contract floor testing: 3 vital steps to protection

The program begins with an initial consultancy and 'MOT' of your flooring:

- 1) Our consultant visits your site with a Pendulum and a Tortus, and tests your surface in wet and dry conditions, thereby achieving a correlation between figures produced by each instrument.
- 2) You continue to test your floors on a regular basis (to be advised, depending upon traffic) with the Tortus, which is fully portable and simple to use.
- 3) We revisit every 12 months, or on demand, to ensure the existing correlation remains by re-testing with the Pendulum.

We will also provide ongoing advice and support, including full product training, the correct and accepted method for recording your floor testing data, and an acceptable cleaning regime necessary to maintain a slip resistant surface.
